Sample Syllabus CSCI 1301 – Introduction to Programming Principles

Knowledge Areas that contain topics and learning outcomes covered in the course

Knowledge Areas	Total Hours of Coverage
Software Development Fundamentals (SDF)	28
Programming Languages (PL)	4.25
Algorithm and Complexity (AL)	3
Social Issues and Professional Practice (SP)	0.75

Body of Knowledge coverage

KA	Knowledge Unit	Topics Covered	Hours	Reference in the Text
SP	History	History of computers,	0.75	Chapter 1
		programming languages,		
		Internet, Web		
PL	Language	Interpretation vs. compiling	0.25	Chapter 1
	Translation			
PL	Basic Type	Primitive types, casting	4	Chapters 2, 3 and 4
	Systems			
SDF	Fundamental	Syntax and semantics,	10	Chapters 1-6
	Programming	variables, expressions,		
	Concepts	assignments, selections, loops,		
		methods		
SDF	Development	Stepwise development using	4	Chapter 6
	Methods	methods		
SDF	Fundamental	Arrays	5	Chapters 7-8
	Data Structures			
SDF	Algorithms and	Design strategies for solving	9	Chapters 1-8
	Design	problems using algorithms		
AL	Fundamental	Linear search, binary search,	3	Chapter 7
	Data Structures	selection sort		
	and Algorithms			

COURSE INFORMATION

Meeting: Class Section 01 MWF 9:00-9:50 a.m. 02 MWF 1:00-1:50 a.m. Science Center

1503B

Instructor: Dr. Y. Daniel Liang Office: Science Center 112 Office Phone: (912) 344 - 3264

email: y.daniel.liang@gmail.com

Office Hours: MWF 8:00 - 9:00 a.m., 2:00 - 3:00 p.m., or by appointment

Text: Introduction to Java Programming, Tenth Brief Edition, Prentice-Hall.

Chapters 1-8 are covered in this course

References: <u>www.cs.armstrong.edu/liang/intro10e</u>

Including answers to checkpoint questions, solutions to even-numbered exercises, download source code for book examples, LiveLab, Quiz,

Animation, etc.

Course URL: <u>www.cs.armstrong.edu/liang/course.html</u>

Check the course website regularly, any changes in assignments, due dates, etc.

will be indicated here.

PREREQUISITES

Math 1113 Pre-Calculus or equivalent

CATALOG DESCRIPTION

Overview of computers and programming. Fundamentals of structured computer programming; primitive data types, expressions, control statements, methods, arrays, searching, sorting; debugging techniques.

COURSE OBJECTIVES

As part of this course, students

- will be introduced to programming concepts and techniques.
- will be introduced to Java language syntax.
- will learn control statements, loops, methods, and arrays.
- will write programs for a wide variety problems in math, science, financials, and games.
- will analyze and design programs.

ABET COURSE OUTCOMES

Upon successful completion of this course, students will be able to

- analyze and design strategies for solving basic programming problems.
- use primitive data types, selection statements, loops, methods to write programs.
- develop programs to solve a variety of problems in math, science, business, and games.
- use the step-wise refinement approach.
- use arrays to store, process, and sort data.
- use an IDE to develop programs.

CLASS

Class time will be used for short lectures, design examples, in class exercises, and quizzes and exams. Class attendance is expected and students are responsible for all material covered in class. Missed work, quizzes, or exams will receive a grade of zero. Class disruption (cell phones, sleeping, talking, etc.) during class will not be tolerated. A warning will be given on the first instance and you will be asked to leave the class on any subsequent instances.

GRADING

Grades will be determined from: attendance (5% Attendance will be checked regularly, but not for every class), programming exercises (25%), three exams (15% each), and final exam (25%). Evaluation scheme is subject to change with a prior notice. Dates for exams will be announced in the class.

Final grades will be based on the following scale: A (90 - 100), B (80 - 89), C (70 - 79), D (60 - 69), and F (< 60). The instructor reserves the right to adjust the grading percentages and scale if necessary.

Extenuating circumstances that prevent timely submittal of work must be discussed with the instructor at least 24 hours in advance or cleared through the Office of the Dean of Students (including a death in the family, serious injury, or illness). Students must supply appropriate documentation verifying the extenuating circumstances that prevented a timely submittal of the assignment.

ASSIGNMENTS

Due dates for programming assignments will be announced in the class. Missed quizzes and late or missed assignments will receive a grade of zero. Programming assignments must be done individually. Source file printout must be submitted in the class on the due day regardless its status (complete or incomplete). In addition to submitting a hard copy, students must also submit the programs to LiveLab. Your grades will be recorded on LiveLab.

ABSENCES

Class attendance is mandatory. Students who miss class due to illness will be counted as attending on LiveLab if proper documents are given. Students registering after the semester begins are responsible for all missed assignments and cannot expect that due dates will be altered.

EMAIL POLICY

For a prompt response, put your name, course number, and class time in the subject of the email.

HELP

Before you ask for help on programs, explain to yourself what the program is doing step-by-step. When you visit me during office hours, make sure you have already submitted your program on LiveLab and bring a printed copy of the program. You can resubmit the program on LiveLab before it is due.

COMPUTER LABS

The following Armstrong Atlantic labs have the software necessary for this course: SC 129, SC 2016

DISABILITIES OR SPECIAL NEEDS

If you have a physical, psychological, and/or learning disability that might affect your performance in this class, please contact the Office of Disability Services which is located in Memorial College Center Room 207A, phone 912 344-2744. The Disability Services Office will determine appropriate accommodations based on testing and medical documentation. Please notify the instructor that you might need accommodations within two weeks of the start of the semester or two weeks of being diagnosed. Please see me privately after class or in my office. You may then choose, by notifying the instructor before the start of each exam or assignment, whether you will need any accommodation. Notification after the start of an exam or last minute notification on an assignment will not be accepted.

ACADEMIC HONESTY

Students must abide by the Armstrong Atlantic Honor Code and Student Code of Contact http://www.sa.armstrong.edu/Activities/hccoc.html

Students are expected to perform their work individually unless otherwise specified by the instructor. Plagiarism will be checked by LiveLab. Students may discuss assignments in general terms with other students and may receive assistance from the instructor or classmates. Assistance does not mean obtaining working designs or solutions and modifying them; this is considered copying.

Submission to LiveLab with the intention to deceive LiveLab is considered as cheating.

All instances of academic misconduct will receive a zero for the assignment and be reported to the Dean of Students. A second instance of academic misconduct will result in an automatic F in the course and possible disciplinary action.

will be indicated here.

PREREQUISITES

CSCI 1301 Introduction to Programming Principles

CATALOG DESCRIPTION

Object-oriented design and implementation. Topics include: object and class design, inheritance, polymorphism, interfaces, graphical user interfaces and event-driven programming, exception handling, file input and output.

COURSE OBJECTIVES

As part of this course, students

- will learn reusing software through a collection of Java predefined classes.
- will understand the differences between procedural and object-oriented paradigms.
- will develop custom classes using encapsulation, polymorphism, inheritance, and abstraction.
- will learn how to write Java applications and Java applets.
- will learn how to create graphical user interface.
- will learn how to deal with exceptions.
- will learn how to write simple file IOs.

COURSE OUTCOMES

Upon successful completion of this course, students will be able to

- understand OO concepts: encapsulation, inheritance, polymorphism, interfaces, abstract classes
- use Unified Modeling Language for design, analysis, and documentation
- develop graphical user interfaces
- develop event-driven programs
- use file I/O and handle exceptions
- design and implement OO programs

CLASS

Class time will be used for short lectures, design examples, in class exercises, and quizzes and exams. Class attendance is expected and students are responsible for all material covered in class. Missed work, quizzes, or exams will receive a grade of zero. Class disruption (cell phones, sleeping, talking, etc.) during class will not be tolerated. A warning will be given on the first instance and you will be asked to leave the class on any subsequent instances.

GRADING

Grades will be determined from: attendance (5%), programming exercises (25%), two exams (20% each), and final exam (30%). Evaluation scheme is subject to change with a prior notice. Dates for exams will be announced in the class.

Attendance will be checked regularly. Missing classes frequently will be automatically dropped out of class.

Final grades will be based on the following scale: A (90 - 100), B (80 - 89), C (70 - 79), D (60 - 69), and F (< 60). The instructor reserves the right to adjust the grading percentages and scale if necessary.

Extenuating circumstances that prevent timely submittal of work must be discussed with the instructor at least 24 hours in advance or cleared through the Office of the Dean of Students (including a death in the family, serious injury, or illness). Students must supply appropriate documentation verifying the extenuating circumstances that prevented a timely submittal of the assignment.

ASSIGNMENTS

Due dates for programming assignments will be announced in the class. Missed quizzes and late or missed assignments will receive a grade of zero. Programming assignments must be done individually. Source file printout must be submitted in the class on the due day regardless its status (complete or incomplete). In addition to submitting a hard copy, students must also submit the programs to LiveLab. Your grades will be recorded on LiveLab. Your grades on LiveLab are subject to changes if LiveLab did not grade the program correctly.

EMAIL POLICY

For a prompt response, put CSCI 1302 in the subject of the email.

HELP

Before you ask for help on programs, explain to yourself what the program is doing step-by-step. When you visit me during office hours, make sure you have already submitted your program on LiveLab and bring a printed copy of the program. You can resubmit the program on LiveLab before it is due.

PREREQUISITES

CSCI 1302 Advanced Programming Principles and MATH 1161 Calculus I

CATALOG DESCRIPTION

Topics include: recursion, generics, linked lists, stacks, queues, hash tables, trees, graphs, heaps,) sorting algorithms, and time and space complexity analysis. Use of application program interfaces (API's).

COURSE OBJECTIVES

As part of this course, students

- will learn the concepts and techniques for recursion.
- will learn how to parameterize data types using generics.
- will learn how to measure the algorithm complexity using the Big O notation.
- will learn how to use classic data structures: array lists, linked lists, stacks, queues, priority queues, sets, maps, binary trees, and hashing.
- will learn how to implement data structures.
- will learn graph algorithms and use them to solve practical problems.

COURSE OUTCOMES

Upon successful completion of this course, students will be able to

- design recursive solutions.
- analyze algorithm complexities.
- describe and analyze sorting algorithms.
- use Java Collections Framework to develop applications.
- implement classic data structures: array lists, linked lists, stacks, queues, heaps, binary trees, hash tables.
- represent and solve problems using graph algorithms.

CI ASS

Class time will be used for short lectures, design examples, in class exercises, and quizzes and exams. Class attendance is expected and students are responsible for all material covered in class. Missed work, quizzes, or exams will receive a grade of zero. Class disruption (cell phones, sleeping, talking, etc.) during class will not be tolerated.
